
(a) step 1: $\mathbf{W}^T\mathbf{y}$ on the grid, 0.2° zoom (39 stars)
v (deg)
u (deg)
$\mathbf{W}^T\mathbf{y}$ (mas)
(b) the kernel image κ (217×217 nodes of 10″)
Δv (deg)
Δu (deg)
κ (mas^2)
(c) step 2: $\kappa * \mathbf{W}^T\mathbf{y}$, whole grid (mean over 8×8 nodes)
v (deg)
u (deg)
$\kappa * \mathbf{W}^T\mathbf{y}$ (10^3 mas^3)
(d) steps 3-4: read back at the stars + noise: **Cy**
v (deg)
u (deg)
Cy (10^3 mas^3)
